

Your own website can finally show what's actually open.

Right now the only place a customer can see a real opening is the site charging you twenty percent. That ends the day you plug this in.

\$24,000

What a charter doing \$400,000 a year through a 20% booking site keeps by moving just **three out of ten** bookings to their own website. Arithmetic off your own statements, not a projection.

THE MATH, ON A \$400K CHARTER	
Booked through FareHarbor at 20%	-\$80,000
Move 30% of it to your own site	+\$24,000
What this costs you for the year	-\$3,588
Net, first year	+\$20,412

How it knows

Every booking platform emails you the second someone books. FareHarbor does. Booking.com does. Airbnb, Peek, Square, Toast – all of them. **They cannot turn that off without breaking their own product.**

We read those emails. No API to apply for, no partnership to get approved, nobody's permission to ask for.

YOU DECLARE 6 jet skis

FAREHARBOR 2 booked, 10:00–12:00 → **4 left**

BOOKING.COM 1 booked, 10:30–12:30 → **3 left**

CANCELLATION 1 released → **4 left**

FareHarbor doesn't know about your Booking.com reservation. Booking.com doesn't know about FareHarbor. You're the only one who sees all of it – and now so does your website.

Run more than one thing?

Pontoons, jet skis, dolphin cruises, parasailing and charters each get their own availability, their own prices and their own booking link – under one account. **See the Docks sheet.**

\$299

PER MONTH

Bring one statement to the first meeting.

Your commission line for last year. We do the subtraction together. If the number doesn't beat what this costs, don't buy it.

THE ONE SENTENCE THAT SELLS IT

"Your website shows what's actually available, right now, across every platform you're on – so people can book you direct instead of through the site taking twenty percent."

RESTAURANTS • BARS • BEACH CLUBS

A menu that is never wrong, on every screen it appears.

The QR code on the table, your website, Google, the delivery apps.
One menu behind all of them, and it's the one you actually printed.

86'd

The word your kitchen already uses. Say it once at 6 p.m. and the grouper comes off the QR menu, the website and the delivery listings **before the next table scans it.**

What it kills

The PDF The one from 2023 still on your website with the old prices. Gone.	The reprint Change a price without a trip to the printer or a sticker over the old one.
The apology "Sorry, we're out of that" – after they already decided they wanted it.	

Then it does something no menu has done

The QR scan happens at a table, at a time, and the check closes on the same ticket.
So the menu knows **what that table actually ordered** – the shrimp scampi, at 7:42, table nine.

That's what turns a menu into the most valuable thing on the table. It feeds the review system, and that doesn't work without it.

Every other QR menu is a PDF with extra steps. Yours is the only one that closes the loop between what a guest looked at and what they actually ate.

Included

IN THE MONTHLY

Bring the current menu to the first meeting.

We'll have it live on a QR code before you leave, and you can change a price from your phone while we're sitting there.

MUSICIANS • BANDS • DJS

The QR code on your stage is worth more than your merch table.

One code. Requests, tips, your list, your shows, your merch. The crowd already has their phone out.

\$10

A request with a shout-out, paid straight to you – cash app, Venmo, however you already get paid. **Twenty of those in a four-hour set is a second night's pay**, from people who were going to yell the song at you anyway.

What they see when they scan

Request a song – search your list, send it up, tip if they want

Tonight's set – what you're playing, what's left

Upcoming shows – every venue, every date, always current

Join the list – a phone number you own, not a follower count

Merch – without leaving the table

The part that matters after the show

A follower on a platform isn't yours – the platform decides who sees your post. **A phone number is yours.** Play the same town in six weeks and you can text the people who were actually in the room last time.

And the venue sees a band that fills the room and brings its own crowd. That's how you get rebooked at a better rate.

Every request app takes a cut and keeps the fans. This one takes nothing and hands you the list.

\$29

PER MONTH · ARTIST

Play one show with it.

Print one code, tape it to the monitor, and count the requests and the numbers at the end of the night.

ELECTRICIANS • PLUMBERS • HVAC • TRADES

Every quote request in one place, answered before the other guy calls back.

You're under a house. The phone rings. They call the next name on the list. That's the whole business problem.

4 min

Roughly how long a homeowner with a real problem waits before calling somebody else. **Whoever answers first usually wins the job**, and it is almost never about price.

What gets installed

Quote requests One form, one inbox, one place. Photos from the customer, so you can price it before you drive.	Service areas What you cover and what you don't, so you stop getting calls forty miles out.
Emergency callout A different path, a different rate, and it reaches you differently after hours.	Scheduling They pick a window you actually have open. No back-and-forth voicemail.
Job photos Before and after, on the job, straight to the customer and to your own page.	Reviews Asked automatically, from the person whose panel you actually replaced.

It answers when you can't

A request comes in at 2:40 while you're in a crawlspace. It goes back immediately from your own number: **"Got it – I can be there Thursday morning or Friday afternoon, which is better?"**

You look at your phone at four o'clock and the job is already scheduled.

You are not buying software. You are buying the jobs you currently lose between 8 a.m. and 5 p.m. because both hands are busy.

\$299

PER MONTH

Count last month.

How many missed calls, and how many of those called somebody else? That number is the whole pitch.

MARINAS • RESORTS • MULTI-CONCEPT

Five businesses under one roof. Five sets of hours. One login.

Every listing service on earth treats you as one business with one phone number and one set of hours. You are not one business and you never were.

1 login

For however many operations you actually run. Each one with its own hours, prices, availability, booking link and reviews – **and each one inheriting the things that really are shared**, so you set the address once.

What that looks like

Flora-Bama

└ Lounge	own hours, own events
└ Yacht Club	own hours, own menu
└ Oyster Bar	own hours, own menu
└ Marina	
└ Pontoon Rentals	own availability, own prices
└ Jet Ski Rentals	own availability, own prices
└ Dolphin Cruises	own start times, own capacity
└ Parasailing	own booking link
└ Fishing Charters	own vessels, own trips
└ Liquor Store	own hours
└ Gift Store	own hours

Why this is the whole problem

Today the dolphin cruise hours are wrong because Google only has one field for hours. The marina phone rings for an oyster bar reservation. A review about the gift shop drags down the charter rating. **Every one of those is the same bug: one record where there should be a graph.**

Each operation gets its own everything. Change the main phone number once and every unit that didn't override it follows. Override the marina's number and the five things under it follow that instead.

This is also why a franchisor or a management company can run twenty properties from one account – same structure, more branches.

Name your operations out loud.

\$299

PER MONTH · PER PARENT

However many you say in that sentence, that's the setup. Most owners have never been asked the question, and the answer is usually more than they expected.

EVERY BUSINESS • THE ONE THAT CHANGES EVERYTHING

Find out who booked you. Not just that somebody did.

FareHarbor knows their name, their number and their email. You get a notification. That's the arrangement, and it's the reason you can't fill a Tuesday.

100%

Of bookings that come through your own page arrive with **a name and a phone number you own**. The platform still takes the transaction. You still get the customer.

How it works, and it's simpler than it sounds

They land on your page and see **real availability** – the thing no other page of yours has ever shown.

They pick a trip.

They give a **name and a phone number**. One line, before anything else happens.

Then they go to FareHarbor and book, exactly as they would have.

The confirmation email comes back to you. We read it.

The name from step three and the booking from step five **get matched**. That's your customer now.

Nobody is asked to leave a platform that works. The booking site keeps the booking. You keep the human being.

What you can do that you couldn't before

Ask for the review From someone you can prove was actually on the boat.	Fill the cancellation Text the people who wanted that exact trip.
Get them back next April They come to the beach every year. You've just never been able to reach them.	

\$299

PER MONTH

One question at the first meeting.

"How many repeat customers did you have last year?" Almost no operator can answer it. After this, you can.

CHARTERS • RENTALS • RESTAURANTS

Three seats just opened for tomorrow. Somebody wants them.

That inventory was going to expire worthless in eighteen hours. It doesn't have to.

\$267

Three seats at \$89 on tomorrow's ten o'clock, sold from **one cancellation and one text message**. Nothing was built for this – the pieces were already there and they connected.

What happens, automatically

10:04 AM cancellation email arrives from the booking platform

10:04 AM availability updates → **3 seats open**

10:05 AM finds people who searched that trip, asked about that time, joined the list, or booked something like it before

10:05 AM texts them from your number

10:31 AM sold

You could not have done this last season at any price, because you had no list, no live count, and no way to reach the people who wanted that exact time.

Works on anything with a capacity

Seats on a cruise. A pontoon on a Saturday. A six-top at 7:30. A chair at 2 p.m. A condo for a three-night gap nobody will ever search for.

Included

IN THE MONTHLY

Count last season's empty seats.

Not the cancellations – the ones that never got refilled. Multiply by your rate. That number is usually larger than the annual cost by a lot.

EVERY BUSINESS • THE CORE OF IT

Change your hours once. And find out if one of them didn't take.

Google, your website, Facebook, the booking site, the POS. One place, one time – and proof it landed in all five.

5 places

What a holiday closing takes today, assuming you remember all five. **Most owners forget one, and the one they forget is the one the customer checks.**

The part nobody else does

After it changes something, it goes and **reads it back on a different path** than the one it used to write. Wrote through the app; checks through a browser on the public page.

So you don't get told "done." You get told which surfaces are right and which one isn't:

CLOSING TIME → 8:00 PM	
Your website	8:00 PM ✓
Google Business	8:00 PM ✓
Booking platform	8:00 PM ✓
Facebook	9:00 PM – not applied

That fourth line is worth the subscription by itself. A clean failure tells you nothing changed. A partial one leaves two versions of the truth out there and nobody knowing which a customer is reading.

And when an app redesigns itself

Every night, every procedure checks the screens it expects are still there. It touches nothing. When one moves, it refuses to act and tells us. **We fix it once and every customer has the fix by morning.**

You aren't buying software. You're buying the fact that somebody absorbs every app redesign, forever, so you never think about it again.

\$299

PER MONTH

Text it and watch.

First demo: you text "change Friday to 9 to 5." Watch it happen, then check Google yourself on your own phone.

EVERY BUSINESS • THE FREE REPORT THAT SELLS THE JOB

Your price is \$349. Facebook still says \$399.

Nobody has ever checked. Not you, not a listing service, not the platforms themselves. So it's been wrong for eleven months.

3 of 4

The usual result. Three surfaces agree with what the owner believes is true, and one doesn't – **and the wrong one is often the one getting the most traffic.**

CANONICAL – HALF-DAY CHARTER, \$349	
Your website	\$349 • checked today
Google Business	\$349 • checked today
Your booking page	\$349 • checked today
Facebook	\$399 • wrong since March
Yelp	couldn't read it yet

Four questions, asked continuously

What's true? The one value you say is correct, in one place, not scattered across nine logins.	How do we know? Which source said so, on what date, and who changed it.
Where is it wrong? Every surface compared against it, by name.	When did we last check? Because "it was right in March" is not the same as right.

Nobody sells this today. Listing services push data out and never look back to see whether it stuck. This is the only thing that goes and reads it.

Free

THE FIRST REPORT

Run it before they buy anything.

Check their hours, phone, price and menu across every surface and hand them the sheet. It's usually uncomfortable, and it sells the rest of the product by itself.

RESTAURANTS · CHARTERS · ANYONE WITH A REVIEW PROBLEM

Reviews from people who actually ordered the shrimp scampi.

Not a star rating for the whole restaurant. A rating for the dish, from the person who ate it, tied to a real check.

Real

We know they were there, when they sat, what they ordered and what they paid, because the ticket says so. **In an internet filling up with generated reviews, a receipt is the last thing that can't be faked.**

What a guest sees

Big Chicken Alfredo — 4.8 · 61 verified orders

Shrimp Scampi — 4.9 · 44 verified orders

Calamari — 4.4 · 88 verified orders

Bushwhacker — 5.0 · 210 verified orders

Why it beats your star rating

A 4.3 tells a tourist nothing. **"The bushwhacker is a 5.0 across two hundred and ten people who actually bought one"** tells them where to go tonight.

And it tells you something no review site ever has: the calamari is dragging. Not the restaurant — the calamari. You can fix a dish. You can't fix a 4.3.

To leave a review you had to be in the building, at a table, with a closed check. Nobody can astroturf that, and nobody else has it.

Included

IN THE MONTHLY

Pick your worst-selling good dish.

That's the one to watch. When it starts showing verified fives, it stops being a secret.

EVERY BUSINESS • THE HOUR YOU GET BACK

Answer every review without signing into anything.

Google, Facebook, the booking sites, your own page. All of them land in one place, and you reply by talking.

0 logins

Most owners never reply to reviews. Not because they don't care – because it means four passwords and an hour they don't have. **Replied-to reviews measurably outperform ignored ones**, and this is the only reason it doesn't happen.

What it's actually like

IT READS "Three stars. Food was great, waited 40 minutes."

YOU SAY "Tell her sorry about the wait, thank her for coming back."

IT DRAFTS a reply in your words, not corporate ones

YOU SAY "Send it."

IT POSTS to wherever the review came from

And it learns how you talk

After thirty replies it knows you say "y'all," that you always invite them back, and that you never blame the kitchen. **After a hundred, the drafts stop needing edits.**

You keep approving every one. It never posts on its own, because a review reply is the most public thing your business says all week.

Nobody's replies sound like a small business owner, because nobody's replies are written by one. Yours will be, and it'll take four minutes a week.

Included

IN THE MONTHLY

Pull up their worst recent review.

Ask what they'd want to say back. Then show them it posted – while you're sitting there.

EVERY BUSINESS • PHONE AND TEXT

Your business line answers itself. From your own number.

Not a 1-800. Not a forwarding service with a strange area code. The number already on your truck, your sign and your cards.

\$0

Per message. Your own SIM is in the phone on your counter, so texts go out on your real line at your carrier's rate. **No middleman taking a cent a message to send a text from your own number.**

Inbound — it answers

"Y'all open Sunday?" Answered in seconds, with hours it verified this morning.	"Any boats at 2?" From live availability across every platform, not just one.
"Got gluten free?" Off the real menu – the one you changed at lunch.	

Outbound — your own list

Slow Tuesday, forty tables open. Text people who've actually been in: **"Half off bushwhackers till 6."** From your number, so it lands like a text from a person instead of a marketing blast.

And it's your list. We don't rent it, resell it or hold it. If you leave, you leave with it.

Everyone sells you a texting product with a number nobody's seen before. Customers ignore those. They don't ignore the number that's been on the sign for eleven years.

It's also how you approve things

When the system wants to do something that matters – change a price, send an invoice – it texts you first and waits. **You reply YES.** Nothing irreversible happens without a person saying so.

\$299

PER MONTH · YOUR SIM

You buy the phone. Forty dollars.

Any Android from any store. Your SIM, your logins, plug it in. That's the setup, and the phone is yours.

EVERY BUSINESS • GETTING FOUND

Ask any AI who has crab legs nearby. It can't tell you.

Every assistant your customers now use is guessing from scraped, stale listings. Yours will be the one that actually knows.

“?” Try it tonight. Crab legs within five miles. A six-top free at 7:30. A charter with two seats tomorrow. **Nothing on earth can answer those** – because nobody has the data.

Why nobody can answer it

It would need live menus, live availability and item-level truth from thousands of small businesses. **No listing service has that**, because the businesses have never had a way to publish it.

You'll publish all three every day as a side effect of running your business. Not extra work – the same updates you're already making.

Google & the maps Hours, photos, posts, menu. Pushed and verified, not typed in and hoped for.	The local directory Your chamber, your tourism board, the regional guide. Same truth.
The assistants Published so an AI reads you directly instead of guessing.	

Listing services charge \$200 to \$1,000 a year per location just to push your hours around, and they hold the distribution hostage to the subscription. We publish yours everywhere and charge nothing for it. It's your data.

\$0

FOR DISTRIBUTION

Ask your phone about their business.

Right there in the meeting. Whatever it gets wrong is the pitch – and it's usually the hours.

EVERY BUSINESS • THE PRICING PROMISE

We take zero percent of your bookings.

Not a discounted rate. Not a lower rate than theirs. Zero. Keep your booking platform, keep your calendar, keep your customers.

0%

Our cut of what you sell – forever. Flat monthly fee for the software and nothing else. **A busy month costs the same as a slow one.**

Why nobody else does this

Because a percentage is how they make their money, and it scales with your success instead of with their cost. The better your season, the more you owe them.

Ours doesn't scale with your revenue because **our cost doesn't either**. Serving your hundredth booking costs us the same as your first.

Keep FareHarbor Or Toast, Square, Peek, whatever you already run. We're not replacing it and not asking you to switch.	Flat, not metered No per-booking fee, no per-message fee, no surprise bill in July because you had a good week.
Cancel and keep working Stop paying and it keeps running exactly as it is. It just stops getting new things.	

Every other platform in your life makes more money when you do.
We make the same. That's why we can tell you to keep the tools you
already have.

\$299

PER MONTH • FLAT

Ask them what their number is.

Every competitor takes a percentage, a per-seat fee, or both. Make them say it
out loud next to ours.

A computer that works for you. Not for an AI company.

A small box on the wall or under the counter. It runs your business, it holds your data, and it belongs to you the way a truck belongs to you.

Yours

Not a cloud account. Not a seat in someone's platform. A machine you bought, in your building, that keeps working if we disappear. **We can't read what's on it, because there's no way in from our side.**

Four things almost nobody can say

We can't see your books There's no remote access. Not "we promise not to look" – there's no door. It isn't built.	An update can't break it If one doesn't come up right, the box puts itself back the way it was. You never find out.
Stop paying, keep working It runs forever, still patched for security. You just stop getting new things.	Wipe it if you want It's a Linux computer. Put anything you like on it. It's your hardware.

What you see

A screen that looks like a smart TV, because you already know how to read one.
No terminal, no file manager, nothing that looks like a computer. And if you'd

rather use it on your phone or a laptop, it's the same system with a different view.

On it, first thing in the morning: **three things that need your OK.** Reply to Maria about the Thursday quote. Invoice 1184, \$2,400, ready to send. Reorder twelve units, \$890, usual supplier. Approve them with coffee in your hand.

Every AI company is racing to get inside your business so your data becomes theirs. This is the opposite. The brain sits on your counter and any AI you like plugs into it – ours, theirs, or the free one.

\$2,495

ONCE · THEN \$299/MO

Or don't buy the box at all.

It runs on a computer you already own for the same monthly. The box is the easy way, not the only way.

THE PLATFORM · WHAT YOU'RE ACTUALLY BUYING

Don't buy five hundred features you'll never use.

You install the six that match your business. The restaurant next door installs six different ones. Neither of you pays for the other's.

6 of 60 What a typical business actually runs. **Every other system in your life charges you for all sixty** and buries the six you need somewhere in a menu you don't have time to learn.

Same platform, four businesses

Restaurant QR Menu · Happy Hour · Reviews · Loyalty · Events · SMS Club	Charter Availability · Fishing Reports · Vessels · Weather · Booking Leads · Last-Minute
Band Song Requests · Tip Jar · Events · Fan Club · Merch · SMS List	Electrician Quote Requests · Scheduling · Service Areas · Emergency · Job Photos · Reviews

And it keeps getting more

Triggers "When a five-star review comes in, post it." "When the last jet ski books, text me." Set the rule once.	New platforms Switch your POS and it's one more module, not a new system and not a new contract.
Your own AI Swap what's underneath any time. Local and private, or your own key. Never locked to one.	Outside developers Anyone can build for it. They get paid; they never get your data.

Every system you've ever bought got worse over time – the vendor moved on, the integrations broke, the price went up. This one keeps absorbing what changes underneath you, because that *is* the product.

\$299

PER MONTH · EVERYTHING

Start with one thing.

Pick the single job that annoys you most this week. We turn that one on. Everything else waits until you ask.
